Erdenebat Byambasuren

Ulan-Bator, Mongolia | +976 95728259 | **Erdenebat.byambasuren21@gmail.com** | https://github.com/1onest4r

SUMMARY

Computer Science student with hands-on experience in C/C++, OpenGL graphics programming, embedded systems, and cross-platform application development. Built real-world geospatial data processing tools, an ESP32-based rocket telemetry payload, and custom graphics prototypes. Interested in systems programming, performance optimization, and offline-first software architecture.

EDUCATION

MIU University, Ulan-Bator, Mongolia — Expected Graduation 2028

- *Bachelor of Computer Science*
- *Relevant Coursework: DSA, Computer Graphics, Computer architecture, Mobile programming*
- *Awards:* Multiple top placement in Hackathons from 2024-2026

TECHNICAL SKILLS

- *Computer Languages: C++17, Dart, GLSL, C*
- *Tools: Flutter, Git, Github, Vim, Linux*
- *Skills: Competitive programming, Team leader, High productivity, Presenting*

WORK EXPERIENCE

Data Deus, Intern Junior System Architect, Ulan-Bator, Mongolia — June 2025 - September 2025

- Helped design a bus lane terminal mapper software that can work on large KML/SVG input to turn it into a geographically accurate imaging tool that has been actively used by the Mongolian Government.

Sodura AI, Intern System engineer, Ulan-Bator, Mongolia — July 2026 - August 2026

- Rebuilt the web for students who are studying for IELTS and improved its latency, responsiveness and design.
- Made multiple games for the IELTS practice web.
- Worked on a project to integrate and use AI for TTS STT.

RAA, Intern Embedded systems engineer, Ulan-Bator, Mongolia — June 2026 - September 2026

- Built a working payload made of multiple MCU hardwares for retrieving useful data from flight.

Soul Ocean Games, Game developer, Ulan-Bator, Mongolia — August 2026 - Still working

- Building the first psychological horror game using Unreal Engine 5 as a level designer and environment decorator

PROJECTS

Leran - Cross Platform note taking app — February 2026 - May 2026

- **Technologies used:** Flutter, syncthing
- **Purpose of the app:** p2p distribution to share data over local internet without requiring users to log in or register
- Currently under development, with plans for public release.

Chaos race - A simple local multiplayer racing game — December 2025 - March 2026

- **Technologies used:** Opengl, c++
- **Purpose of the game:** Made for research purposes such as implementing custom shader pipeline, and learning fundamentals.

Apogee - Amateur rocketry payload — June 2026 - September 2026

- **Technologies used:** C, esp32, humidity meter, MPU-6050, LO-RA 02,
- **Purpose of the project:** Built a fully working payload for a rocket to retrieve data from its flight and its surroundings such as humidity, acceleration, amount of propulsion produced, and tilts from its main gravity center wirelessly (successfully worked in 648m “peak rocket height reacher during flight”).
